Container Sealing Procedure

All containers must be sealed with high security seals, that meet the ISO 17712 standard for high security seal. When possible, the seal should always be placed in the Secure Cam position to ensure the container sealing security.

Examples of correct sealing position are depicted below:

Any container received by Evergreen Line cannot meet this requirement may be rejected to load. Additional sealing with Evergreen Line high security seal may be adopted at carrier's discretion in any stage of transportation without prior consent from shipper. Evergreen Line retain the civil right to reclaim from the shipper to absorb these extra sealing fees when violating these seal requirements, if any. Additional sealing with Evergreen Line seal should be under no circumstance to become carrier's obligation.
